SUMMARY

Software Engineering Master's student and Stanford Hackathon winner specializing in frontend architecture, AI powered user interfaces, and full stack web applications. Demonstrated track record at Parspec and Terminal Trends engineering responsive React and TypeScript user interfaces, building interactive analytics dashboards, and optimizing web application performance.

PROJECTS

OmniTrack AI | AI Platform Frontend & Multimodal Dashboard GitHub

- Processed unstructured live streaming inputs and user telemetry natively in cloud infrastructure by engineering a zero to one full stack web interface using React, TypeScript, and Python.
- Achieved sub 100ms vector retrieval UI updates by optimizing frontend state management algorithms for compute intensive concurrent requests.
- Enhanced frontend responsiveness and component stability by 30 percent by building continuous user interaction monitoring and automated component testing suites.

Low Latency Search Engine | High Performance Analytical User Interface GitHub

- Analyzed and queried high volume structured datasets in real time by engineering a custom responsive analytical dashboard as a solo developer using React, TypeScript, and Java.
- Decreased query rendering latency by 35 percent by implementing client side virtualized lists, custom indexing views, and optimized state updates.
- Increased frontend data processing throughput by 20 percent by profiling client memory allocations and tuning reactive render cycles.

AgenticFlow | AI Workflow Visualization Platform GitHub

- Visualized complex schema migrations and automated execution loops across cloud systems by building a real time node orchestration interface using React, TypeScript, and Node.js.
- Increased frontend data rendering speed by 40 percent by designing concurrent state synchronization loops and low overhead WebSocket interfaces.
- Maintained strict visual consistency and state accuracy across application execution boundaries by engineering an automated UI verification layer.

WORK EXPERIENCE

Applied AI Intern, *Parspec, Inc., USA* **May 2026 – Dec 2026**

- Improved product-search relevance over a distributor inventory catalog, raising **recall@3 from 50% to 90%** on a **5,000-query** labeled evaluation set, by replacing keyword-only search with **hybrid** lexical and **semantic retrieval** fused via **reciprocal rank fusion**, re-scored with a **cross-encoder re-ranker**.
- Eliminated manual review of several-hundred-page construction documents for distributor bids, extracting structured product records at **88%** precision across **CSI Divisions 26 and 22**, by building a **RAG** pipeline over written specifications and schedules that grounds every extracted field in its source excerpt and auto-enriches contractor **Quantity Take-Off** line items.
- Automated lighting fixture product substitutions across 1.2M+ indexed datasheets at 85 percent match precision by engineering a retrieval pipeline that resolves free text inputs to anchor products and scores candidates via multi attribute filtering and semantic search.

Full Stack Developer, *Terminal Trends, India* **May 2024 – Dec 2024**

- Developed and optimized RESTful APIs using **Node.js** and **Express** to integrate real-time EV charging station data from multiple vendors (e.g., Tesla, government APIs), reducing server response time by **40%** and improving data reliability across the platform.
- Built interactive route-planning features with **React** and **Redux**, enabling users to locate nearby EV stations, view waiting times, pricing per kWh, and other live metrics along their journey, enhancing user convenience and engagement.

TECHNICAL SKILLS

Frontend Architecture: React, TypeScript, Next.js, Redux, JavaScript, HTML5, CSS3, Tailwind CSS, Component Libraries, Web Vitals
AI Platform & Full Stack Integration: LLM Interface Integration, Prompt Engineering, RESTful APIs, GraphQL, Node.js, Express, Python
UI Performance & Testing: Client Side Rendering Optimization, State Management, Responsive Design, Jest, Playwright
Developer Tools & Workflows: Git, GitHub, Docker, Webpack, Vite, CI CD Pipelines, Figma to Code Translation

EDUCATION

San Jose State University **San Jose, CA**
Master of Science in Software Engineering

ACHIEVEMENTS

- **Winner – Davis Wright Tremaine LLP Prize**, *Stanford Codex LLM x Law Hackathon (2025)*
  Led a 4-member team to build a **RAG-based legal QA engine** using Python, GPT-4, and vector-embedding retrieval with **cosine similarity**, enabling accurate extraction of contract clauses and delivering **90%+ correct answers**, outperforming 30+ teams.
